

Cyber Security Maturity Assessment

Get to know your cyber security posture.

The fast-changing threat landscape makes identifying and addressing your cyber security risks tough. Field Effect's Cyber Security Maturity Assessment can help.

Our Cyber Security Maturity Assessment is ideal for organizations wanting a dedicated expert's evaluation of their risks, cyber security maturity level, and actionable recommendations to strengthen their security posture.

How it works

The assessment has three phases, starting with a survey to identify your key risks. Survey results feed directly into a tailored Security Control Implementation Plan that outlines actions to minimize your threat surface and maximize security efforts.

Your assessment also includes a three-month deployment of Covalence, our leading cyber security solution. Covalence combines human intelligence and machine automation to reduce your cyber risks and strengthen your defence.

1. Cyber security survey

The electronic survey is the foundation of the assessment. The survey is straightforward, with yes-or-no questions organized into groups.

Our cyber security experts based these questions on their experience assessing organizations small and large, observations from our incident response services, and industry standards, such as the NIST CSF, ISO 27001, and the CIS Controls.

2. Maturity assessment report

After you complete the survey, an analyst will assess and map the results to a series of cyber security controls and your maturity level.

You will receive a Cyber Security Maturity Assessment Report containing your:

- Maturity level designation
- Gaps and risks analysis
- Security Control Implementation Plan

The Security Control Implementation Plan will make specific recommendations based on any gaps identified during the analysis. The plan is actionable and understandable, with the context needed to understand the suggested security controls, what they do, and why they work.

3. Discussion and review

We will schedule a one-hour interactive session between your stakeholders and the Field Effect team to discuss and review the report. This session serves as an opportunity to ask questions and gain clarity.

A critical next step is implementing the recommendations found in the report. Your three-month Covalence deployment is designed to satisfy many of the security controls needed to mitigate cyber threats.

Preparing for your assessment

We recommend reviewing the table below before the assessment begins. The categories are not exhaustive but highlight the types of information touched on in the survey.

Categories

- Account management
- Assurance testing
- Audits and reviews
- Backup policy and planning
- Cloud infrastructure and services protection
- Continuity planning
- Data loss prevention
- Email and web browsing protections
- Endpoint protection
- Governance and leadership
- Identity and access management (IDAM) and monitoring
- Information management
- Inventory and controls
- Log collection and analysis
- Physical security
- Privacy management
- Remote access management
- Review and validation
- Secure network design
- Security awareness training
- Security policies
- System hardening
- Threat detection
- Vulnerability detection and management
