

Network Coverage

Achieve the visibility for comprehensive detection and managed response on your network

The risk of a cyberattack is higher than ever for businesses of all sizes. Gaps in network coverage leave you blind to critical vulnerabilities in your threat surface and the early signs of an attack that endpoint and cloud protection alone may miss.

Field Effect's network coverage extends your protection, securing the perimeter of your environment by monitoring all traffic moving in and out. Combined with endpoint and cloud, network coverage provides a complete picture of your threat surface and the traffic coming in or out of your environment, delivering the context needed for accurate and effective threat detection. This provides you with the ability to:

EXTEND YOUR COVERAGE

Monitor relevant security activity from devices that don't support endpoint agents such as IoT or roaming assets. Stay on top of new or previously unknown devices and unauthorized devices that are brought into your network, to prevent suspicious activity from going unnoticed.

BOOST YOUR EXTERNAL DEFENSE

Don't wait for threat actors to strike. Quickly identify and remedy vulnerabilities in your network that make you an easy target.

DETECT SUSPICIOUS TRAFFIC

Identify early signs of attack, monitoring north-south traffic in real-time, backed with the latest threat intelligence. This includes abnormal connections and data transfers, command and control communications, shadow IT, and more.

Maximize the protection 24/7 SOC brings you

Working with your endpoint and cloud protection, Field Effect's network coverage provides the holistic visibility needed to streamline investigations, understand the full scope of your attacks, and identify root-cause.

This allows our experienced 24/7 SOC team to detect and stop your threats on your behalf with the highest degree of confidence and to:

- Detect threats earlier
- Reduce response times
- Eliminate false positives

Key benefits:

- ✓ Achieve a complete and trusted view into your environment
- ✓ Get full asset identification, including Shadow IT
- ✓ Highlight vulnerabilities across your network
- ✓ Boost your alert fidelity with cross-environment context
- ✓ Get total peace of mind with 24/7 monitoring & threat hunting

Complete visibility you can trust

You can't stop threats that you can't see. That's why during attacks, threat actors will attempt to delete or alter traces of their activity, which would otherwise be a clear sign of an intrusion, so they can continue to maneuver undetected to accomplish their goals. Field Effect's network detection delivers tamper-proof visibility into your network with a privacy-first approach, so no attack goes unnoticed, and your data remains safe. This means you have visibility you can trust and protection you can depend on around the clock.

Stop threats on your network with a privacy-first approach

- Field Effect's network sensor is installed behind your firewall, passively capturing all network traffic without generating traffic of its own, providing maximum visibility while preventing unauthorized access
- Network traffic is analyzed by Field Effect's proprietary analytics engine, directly on your sensor for the latest vulnerabilities and threats as well as suspicious behavior, without decrypting your data or introducing risk.
- Essential security data remains encrypted and stored for 90 days, enabling deeper analysis and threat hunting by the Field Effect's SOC.
- Security data can be leveraged to further enrich investigations, identify event patterns, and validate threats, improving alert fidelity, decreasing cost, and improving your cybersecurity effectiveness.

Complete protection in one simple solution.

Field Effect protects your entire threat surface over cloud, network, and endpoint with defense in depth, detecting the latest cyber threats and vulnerabilities – in one simple solution. You can count on us for continued support and guidance from the industry's top cybersecurity experts.

About Field Effect

Field Effect believes that businesses of all sizes deserve powerful cybersecurity solutions to protect them.

Our threat monitoring, detection, and response platform, along with our training and compliance products and services are the result of years of research and development by the brightest talents in the cybersecurity industry. Our solutions deliver sophisticated, easy-to-use and manage technology with actionable insights to keep you safe from cyber threats.
